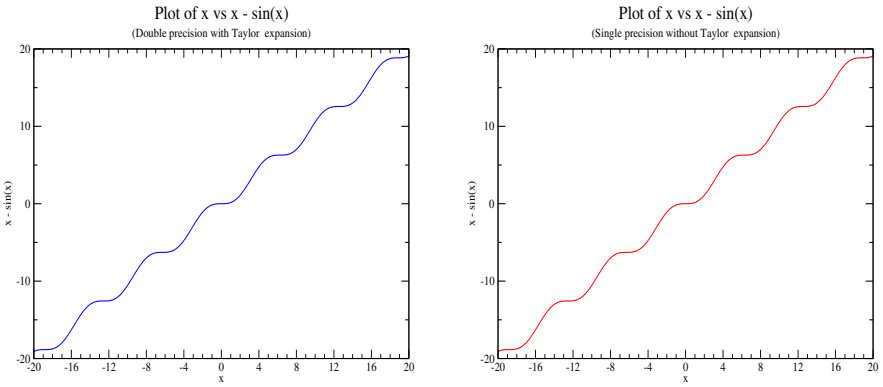
## 2 Multiple images in one figure



(a) Single Precision (b) Double precision

.

## 3 Wrapping text around a figure

The package wrapfig provides a useful feature, text can be floated around the images.

```
First import the package wrapfig by adding  \usepackage{wrapfig} to the preamble.

After that you can use the environment <code>wrapfig,
it takes two parameters that are passed inside braces:
the alignement that can be l, r, c, i or o;
this letters stand for left, right, centre, inner and outer
(the last two intended for two-sided documents).
The second parameter is the width of the figure, in the example
is 0.25 the width of the text. See the reference guide for a list of possible length units.
```

## 4 Referencing

We can reference images, for instance, the image 3 shows single precision graph.

# 5 Math references

As mentioned in section 4, different elements can be referenced within a document

## 5.1 powers series

$$\sum_{i=0}^{\infty} a_i x^i \tag{1}$$

## 5.2 example of reference

The equation (1) is a typical power series.
